

LTE ACTIVATION ADVICE

Navigating Cellular Data Plans & Activation

WiFiRanger is pleased to provide LTE solutions that are not locked into a specific Cellular carrier. This approach gives the customer flexibility and more choices for data plans than other competing offerings which are tied to a specific carrier and / or data plan. Giving you the freedom to find your own data plan to fit your needs is the entire goal of the WiFiRanger LTE solutions.

As such, the Cellular carriers and data plans compatible with the WiFiRanger LTE solutions are subject to change. The Cellular landscape is always evolving and advancing, so our goal is to assist the customer in making the most of their data options. We offer the following advice to help consumers navigate the data plan and activation topics when it comes to the WiFiRanger LTE solutions.

IMPORTANT CONSIDERATIONS

- **Data Plan Availability Varies by Region**

Some Cellular carriers offer certain data plans by region. As such, you may find that the data plan that you desire is available through a Cellular reseller or representative in another area while your local representative has more limited options to sell you. Check around or call a rep in another area if you can't find what you want locally.

- **SIM Card Type May Affect Data Plan Options**

WiFiRanger provides the most universally desirable SIM card types for typical consumer data plans. However, there are types of SIM cards assigned to business plans or otherwise that may be more desirable for some. It is important to ask your Cellular carrier if the SIM card you provide them is the right kind to meet your data needs.

- **Ease of Device Activation Varies by Reseller / Carrier**

In some cases, it can be difficult to activate the WiFiRanger LTE modem and SIM card depending on who you talk to. Perhaps the representative works for a Cellular reseller that does not have the offerings you desire, or you need a more knowledgeable representative to handle your request. Ask different Cellular stores, resellers, or a direct Carrier representative until you find the right person to activate your modem and SIM card on the desired plan.

- **Data Plan Pricing Depends on Your Cellular Account**

WiFiRanger cannot affect pricing of data plans offered by Cellular carriers. In large part, the price of data plans for the WiFiRanger LTE modem are affected by your Cellular account type and other data plan(s) on your account. In some cases, the WiFiRanger LTE modem will require having a data-only plan that is separate from the data plan of your smartphones or other devices. Checking with your carrier on costs will help you to understand how the carrier will handle the WiFiRanger LTE modem pricing and data amounts available.
