

SUPPORTED AIRCARDS

Revised September 2016

Tethering Cellular Devices

Indoor WiFiRangers are equipped with a USB port which can be used to tether a 3G/4G Aircard, MiFi, or Smartphones. This feature works plug-n-play for simply and easily sharing Cellular internet with everything on the WiFiRanger network. Say goodbye to complicated 3G/4G routers and say hello to the convenience and reliability of the WiFiRanger's Cellular device support.

Even if your 3G/4G device is not found on this list, it may very well be able to tether via USB to the WiFiRanger. This list specifies only devices which have been officially verified to work based off current customers or data collected once a month. Many other devices will work plug-n-play but cannot be guaranteed to work with the WiFiRanger.

If you use a new device that is not on this list, please contact questions@wifiranger.com to inform us to add this new device to the supported list.
